Subject: **Medical depositions**

Morning Hans,

Wanted to touch base this morning because the call from you about something not being medically linked has been on my mind. I'm not sure what was said during that deposition with the drs that prompted the call but I have been thinking about what it could be. Most likely it was the right elbow procedure.

During my deposition I remember being asked if the two were linked and I answered yes. Let me explain my answer to you. If the chainsaw had not gone through my arm then the procedure on my elbow wouldn't have happened. That procedure was exploratory to find what was bothering the arm from the chainsaw. Upon opening up the arm they did find some compressions which from my understanding was nothing unusual for a male of my age and very well may or may not have happened during my retreat from the chainsaw when I ended up half way across the yard on the ground. Incidental finding or not it still would not have been found if I hadn't had the chainsaw incident. So as I see it they are linked good or bad and cannot be separated. The exploratory procedure was to find and possibly fix issues relating to the chainsaw incident. They also removed a ton of scar tissue in the forearm on the same day during the same exploratory procedure that was a direct result of the chainsaw.

Hope this helps explain things better.

Let me know,
Thanks,
Paul
