Subject: **Medical update**

Hi Hans,

Had another Dr's appointment with Dr. Sagerman at hand surgery associates. He read me the findings from the surgery. He said the chainsaw did not cut the ulnar nerve but the nerve was compressed in the ulnar groove at the elbow. Probably from scar tissue growing in the forearm and pulling the nerve tight in the ulnar groove. The scar tissue had apparently grown and attached my muscles to the skin and each other. Dr Sagerman said they managed to separate the muscles and skin.

I have another appointment with Dr.Sagerman in a month and am doing physical therapy.

I will send a few pictures of what the arm looks like 1 month after the surgery as soon as I can get someone to use the camera for me today.

Thanks,
Paul
